

Wizmatch Staffing OS

Team Standard Operating Procedure

Demand discovery to POC verification, requirement delivery, candidate matching, submission, placement, invoice, and collection.

Production	crm.growthescalators.com/wizmatch/dashboard
Pilot users	Jatin and Kanishk
Core rule	Record the truth and always date the next action

1. Operating flow

Use one traceable workflow. An imported job is a signal, not an accepted requirement.

The screenshot shows the 'Wizmatch CRM' dashboard. At the top, it says 'Wizmatch Dashboard' and 'Tenant-separated staffing CRM overview for requirements, candidates, contacts, outreach, tasks, inbox, placements, and safety readiness.' Below this are four status boxes: 'MANUAL APPROVAL' (Required before outreach), 'PAID DISCOVERY' (Preview-first manual only), 'CANDIDATE SUBMIT' (Never automatic), and 'LOGIC MODE' (Deterministic first). The main section contains eight cards with metrics: 'ACTIVE REQUIREMENTS' (1, 0 urgent), 'AVAILABLE CANDIDATES' (311, 311 total profiles), 'PRIORITY SIGNALS' (3, 1 matched), 'QUALIFIED COMPANIES' (5, 1 approved contacts), 'REVIEW ACTIONS' (14, 14 safe actions), 'UNREAD INBOX' (0, Email + WhatsApp), 'OPEN TASKS' (0, Open work requiring action), and 'ACTIVE PLACEMENTS' (0, In progress now). At the bottom is a 'Wizmatch work order' section with a 11-step process flow: 1. Review Workbench, 2. Client Discovery, 3. Signals, 4. Contact Intelligence, 5. Requirement Priority, 6. Requirements, 7. Candidate Intelligence, 8. Candidates, 9. Source Candidates, 10. Placements, 11. Analytics.

- Signal -> company -> verified POC -> accepted requirement.
- Reviewed candidate evidence -> match -> shortlist -> exact consent.
- Approved submission -> interview -> offer -> placement.
- Placement, invoice, and collection remain separate records.

2. Review demand signals

Open Wizmatch -> Signals. Qualify only relevant public demand and reject stale, duplicate, non-technical, or commercially unsuitable signals.

The screenshot shows the 'ib Signals' section. It has a header 'ib Signals' and a sub-header '11 total signals - auto-refreshes every 30s'. Below this are three cards: 'TheirStack' (active, 15 new, 0 duplicate, buttons for 'Free preview' and 'Run now'), 'ATS polling' (active, 0 new, 0 duplicate, button for 'Run now'), and 'LinkedIn X-Ray' (configured, off, no run recorded, SearchAPI shared allowance: 0/5 today - 0/80 this month. Requirement-first only). At the bottom are filters for 'All Status', 'Any Score', and 'Source filter...', and a 'Refresh' button. Below the filters is a table with columns: 'JOB TITLE', 'COMPANY', 'HAVE OPEN', 'SCORE', 'ENVELOPE', and 'STATUS'.

- TheirStack runs Monday and Thursday with a capped cohort.
- ATS polls only approved company boards.
- X-Ray is requirement-first and remains off until a genuine reviewed requirement exists.
- A signal never becomes an accepted requirement automatically.

3. Verify the hiring POC

Open Companies & Contacts. Research CRM relationships first, then company pages, public search, and finally manual research.

+ Link CRM person

PERSON	ROLES	CONTACT	REQUIREMENTS	NEXT ACTION
No hiring contacts linked yet.				

Requirements by source person

ROLE	SOURCE PERSON	STAGE	NEXT ACTION
No requirements for this company.			

- Record the named person, title, category, evidence URL, verification state, owner, and next action.
- Never guess an email or phone number.
- A generic careers inbox cannot be the primary source attribution.
- Keep Person A/SAP and Person B/Java histories separate.

4. Create and accept the requirement

Open Requirements -> New Requirement. Ignore the retained ZZ AUDIT TEST production row; it is historical QA evidence.

Requirements 1 requirements New Requirement

in a client JD (paste or upload) into a branded requirement sheet to share with sub-vendors.

Company... Skill... Min exp (yrs) Location... Any Work Mode Any Region Any Employment Any Priority Any Status

EQUIPMENT	CLIENT	SOURCE PERSON	ASSIGNED TEAM	LOCATION	POSITIONS	BUDGET	REGION	STATUS	SHEET	CANDIDATES
Z AUDIT TEST - Senior Backend Engineer (DELETE ME) Node.js TypeScript PostgreSQL AWS		Needs attribution	Unassigned	onsite	1		India	draft sheet ready	PDF Regenerate	Find

- Require company, named POC, genuine channel, owner, recruiter, SLA, and dated next action.
- Review mandatory and preferred canonical skills before acceptance.
- Keep unknown facts unknown.
- Store original budget/rate, currency, and period when known.

5. Work the assigned queue

Use My Work as the daily queue. If it is empty, correct assignment/readiness in Wizmatch instead of creating a parallel spreadsheet.

My Work / Today Refresh

or assigned requirements, dated next actions and linked staffing tasks.

Assigned requirements (0)

EQUIPMENT	SOURCE	MY ROLE	STAGE	NEXT ACTION
No active requirements are assigned to you.				

Open linked tasks (0)

No open staffing tasks.

- Every active requirement has an owner, recruiter, stage, SLA, and dated next action.
- Close stale work with an explicit reason.
- Review overdue actions every morning and before end of day.

6. Review candidates and matching

A discovered lead is not a verified candidate. Validate skills, experience, recency, evidence, location, availability, and commercial facts first.

alent Matching

tainable, requirement-specific matches. Decisions never submit or contact a candidate.

[Refresh](#)

SAP ABAP/FICO and Java/JavaScript stay separate unless a requirement explicitly allows a broad-family rule.

No candidate matches need your review.

- Review blockers before score.
- SAP ABAP, SAP FICO, Java, and JavaScript remain distinct.
- Choose Shortlist, Watch, or Reject and record a reason.
- A shortlist never creates consent or a submission.

7. Consent and delivery

Obtain current, revocable consent for the exact requirement. Prepare a draft, obtain the required approval, and record delivery only after it actually occurs.

Submissions & Delivery Refresh

sent → approval → manual delivery record → interview → offer → placement. This page never sends automatically.

STARTS 0	GROSS MARGIN 0	INVOICED 0	COLLECTED 0	AVG. TIME TO FILL —
-------------	-------------------	---------------	----------------	------------------------

Exceptions: 0 overdue - 0 missing next action.

Loading delivery records...

- No submission without exact-requirement consent.
- No duplicate active submission for the same candidate and requirement.
- Every interview and offer links to the exact submission.

8. Placement and commercial close

Record permanent or contract economics. Keep placement, invoice, and collection as separate milestones.

All roles 0 placements - No commercial value recorded All recruiters All primes Export Add Placement

Submitted 0 No commercial value recorded + New	Interviewing 0 No commercial value recorded + New	Offered 0 No commercial value recorded + New	Started 0 No commercial value recorded + New	Ended 0 No commercial value recorded + New	Lost 0 No commercial value recorded + New
---	--	---	---	---	--

- Permanent: fee, replacement period, refund exposure.
- Contract: bill rate, loaded cost, currency, period, and gross margin.
- A sub-20% margin exception needs an explicit admin record.
- Never fabricate production interviews, offers, starts, invoices, or collections.

9. Analytics and readiness

Use Analytics for conversion and economics. Use System when a module appears empty or unavailable.

- Track signal relevance, POC completion, accepted requirements, qualified candidates, and conversions.
- Track time to shortlist/fill, invoicing, collection, and margin.
- An empty funnel is not a software fault when no genuine records exist.

10. System checks

System distinguishes technical readiness from missing operating data.

- Check schema, usable funnel, missing-data, provider, guardrail, and automation status.

- Use Retry for honest failure states; demo records must never replace failed live data.
- Sending and automatic submissions remain disabled.

11. Daily operating rhythm

Morning	My Work; overdue actions; new TheirStack/ATS signals; POC assignments.
Midday	Verify POCs; record coordination; create genuine requirements; complete skills and ownership.
Afternoon	Review candidate evidence; decide matches; obtain consent; prepare submissions; update feedback.
End of day	Date every next action; close stale work; review exceptions; reconcile commercial milestones.

12. Final checklist

- Correct company and actual source POC.
- Genuine contact channel and verification evidence.
- Clear owner, recruiter, SLA, and dated next action.
- Canonical requirement skills and evidence-backed candidate facts.
- Exact consent, approved submission, and traceable delivery.
- Placement, invoice, and collection recorded separately.

Pilot targets

- At least 80% relevance among the first 25 reviewed qualified TheirStack signals.
- 100% of qualified signals have a POC state, owner, and next action.
- Named POC within 24 hours where public evidence exists.
- Genuine channel or explicit research blocker within 48 hours.
- At least four qualified candidates per workable requirement where supply exists.
- Zero automatic submissions and zero duplicate provider signals after reruns.
